Induced Abortion Summary

Background

The 2022 Annual Abortion Report presents information derived from both the “Confidential Abortion Report” and “Post Abortion Care Report for Complications” in Ohio; reporting forms are included as Appendices I and II. Readers should note that abortion statistics in this report are limited to terminations occurring in Ohio; they do not include Ohio residents who obtained abortions outside the state.

Characteristics of Induced Abortions Reported in Ohio, 2022

Induced abortion statistics have been prepared in Ohio since 1976. Several trend comparisons in the 2022 Annual Abortion Report date back to 2004. A total of 18,488 induced pregnancy terminations were reported in Ohio for 2022, including 17,201 obtained by Ohio resident women (93%). This represents a 15% decrease in induced pregnancy terminations from 2021 to 2022.

Approximately 8.2% of women who obtained abortions in 2022 were under 20 years of age, with another 29.5% between the ages of 20-24 years of age (Table 2). Approximately 81.5% of women who obtained abortions in Ohio were never married, divorced, or widowed (Table 2). Approximately 11.5% of women who obtained abortions in Ohio were married or separated (Table 2). Of all resident women who obtained abortions and for whom race was reported, approximately 43.1% were White; 48.4% were Black; 3.1% were Asian/Pacific Islander; and 5.1% reported more than one race (Figure 2). 5.8% of women with known ethnicity who obtained abortions were of Hispanic origin (Table 1).

The 2022 Ohio abortion rate was 7.8 per 1,000 resident women ages 15-44 years old, a decline from the 9.3 rate in 2021 (Figure 4). The 2022 Ohio resident abortion ratio was 134 abortions per 1,000 live births, a decline from the 160 ratio in 2021 (Figure 4).

More than half of all induced abortions in 2022 involved pregnancies of less than nine weeks (66.5%), with approximately 22.5% involving pregnancies of nine to 12 weeks (Table 2). There were 342 abortions in 2022 involving pregnancies of 19 or more completed weeks of gestation (Table 2). That represents a decrease from the 486 reported in 2021. The abortion reporting form requests methods used to determine gestational age: ultrasound was used in 89.5% of cases (Table 8b). The vast majority of reported abortions were obtained in six major metropolitan areas of Ohio (Table 6).

Curettage was the second most used method of pregnancy termination in 2022 (42%) (Table 7). That method has decreased since 2001 when 87% of terminations were by curettage. Mifepristone was reported as the medication for non-surgical termination for 8,966 abortions, followed by 3,997 terminations using Misoprostol, and seven terminations using Methotrexate (Table 7).

The “Confidential Abortion Report” form (Appendix I) was modified in June 2022, to add questions about the examination and assessment of a fetal heartbeat pursuant to Ohio Revised Code 2919.192 and Ohio Administrative Code 3701-47-07. The detection of a fetal heartbeat combined with the clinical estimate of gestational age determines the number of fields that must be completed on the “Confidential Abortion Report” form.

Figure 1. Resident Induced Abortions, Ohio, 1976–2022

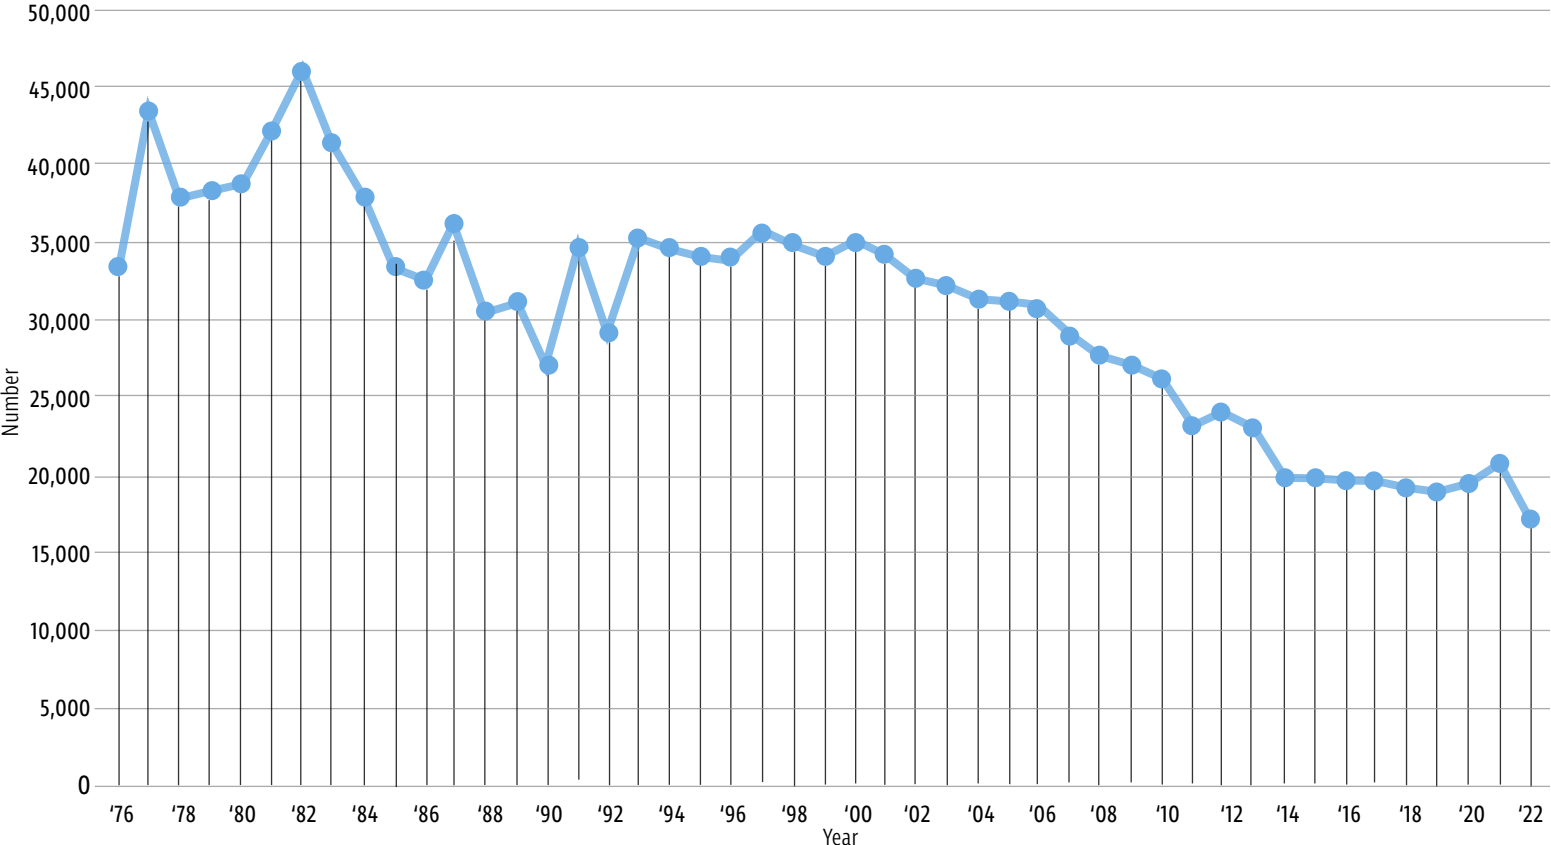

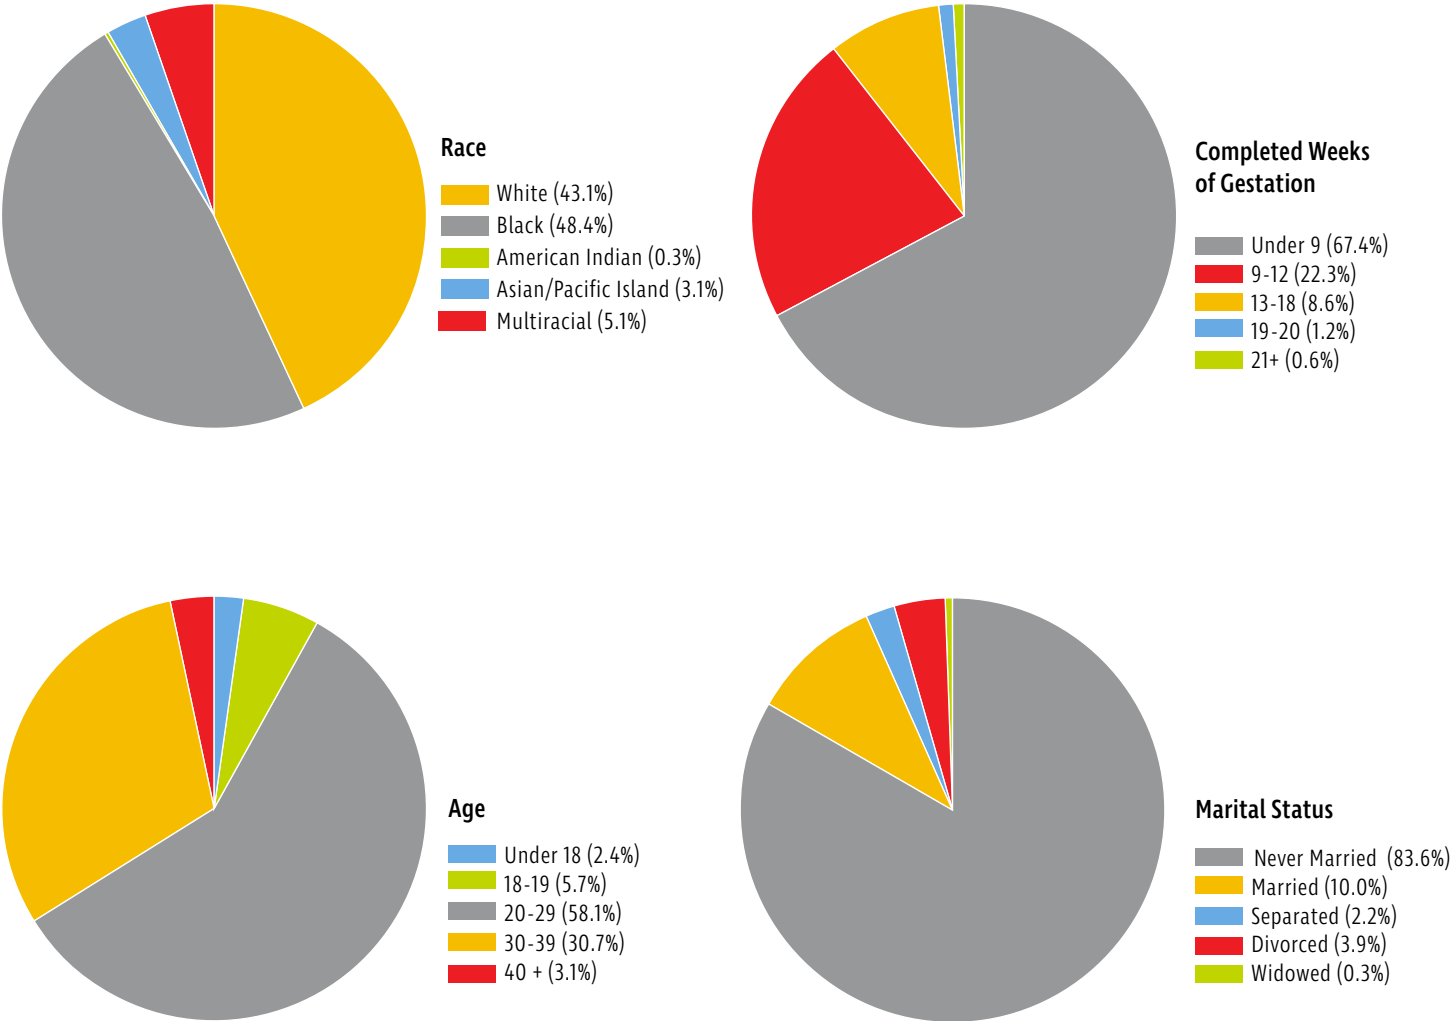

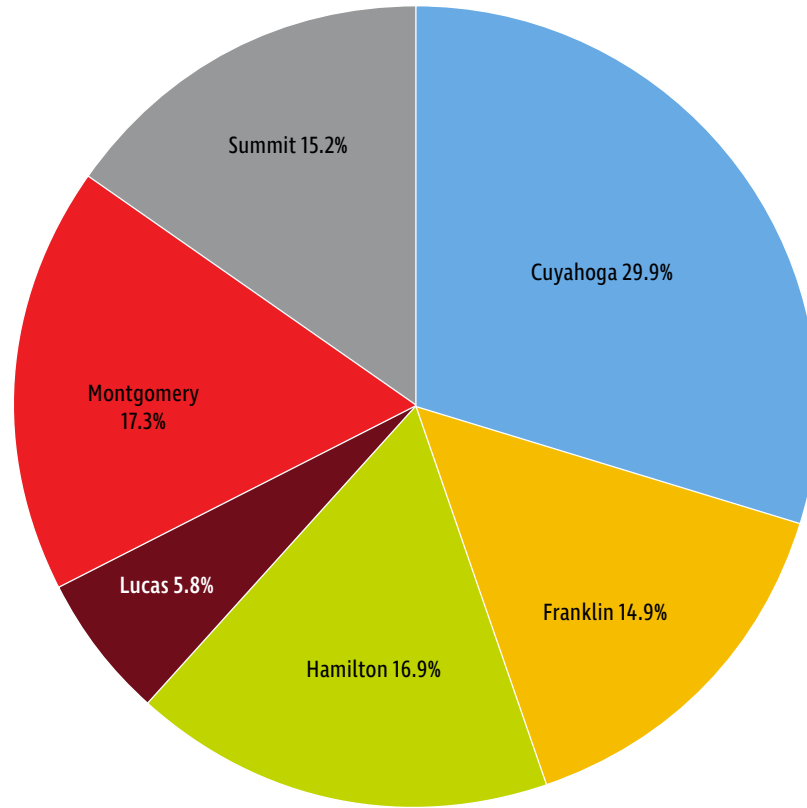

Figure 1 shows the trend line in the number of resident induced abortions in Ohio from 1976-2022. Specific counts from the last decade can be found on Table 2 in this report. Past annual reports can be found on the Ohio Department of Health website: <https://odh.ohio.gov>.

Figure 2. Selected Characteristics of Resident Induced Abortions in Ohio, 2022

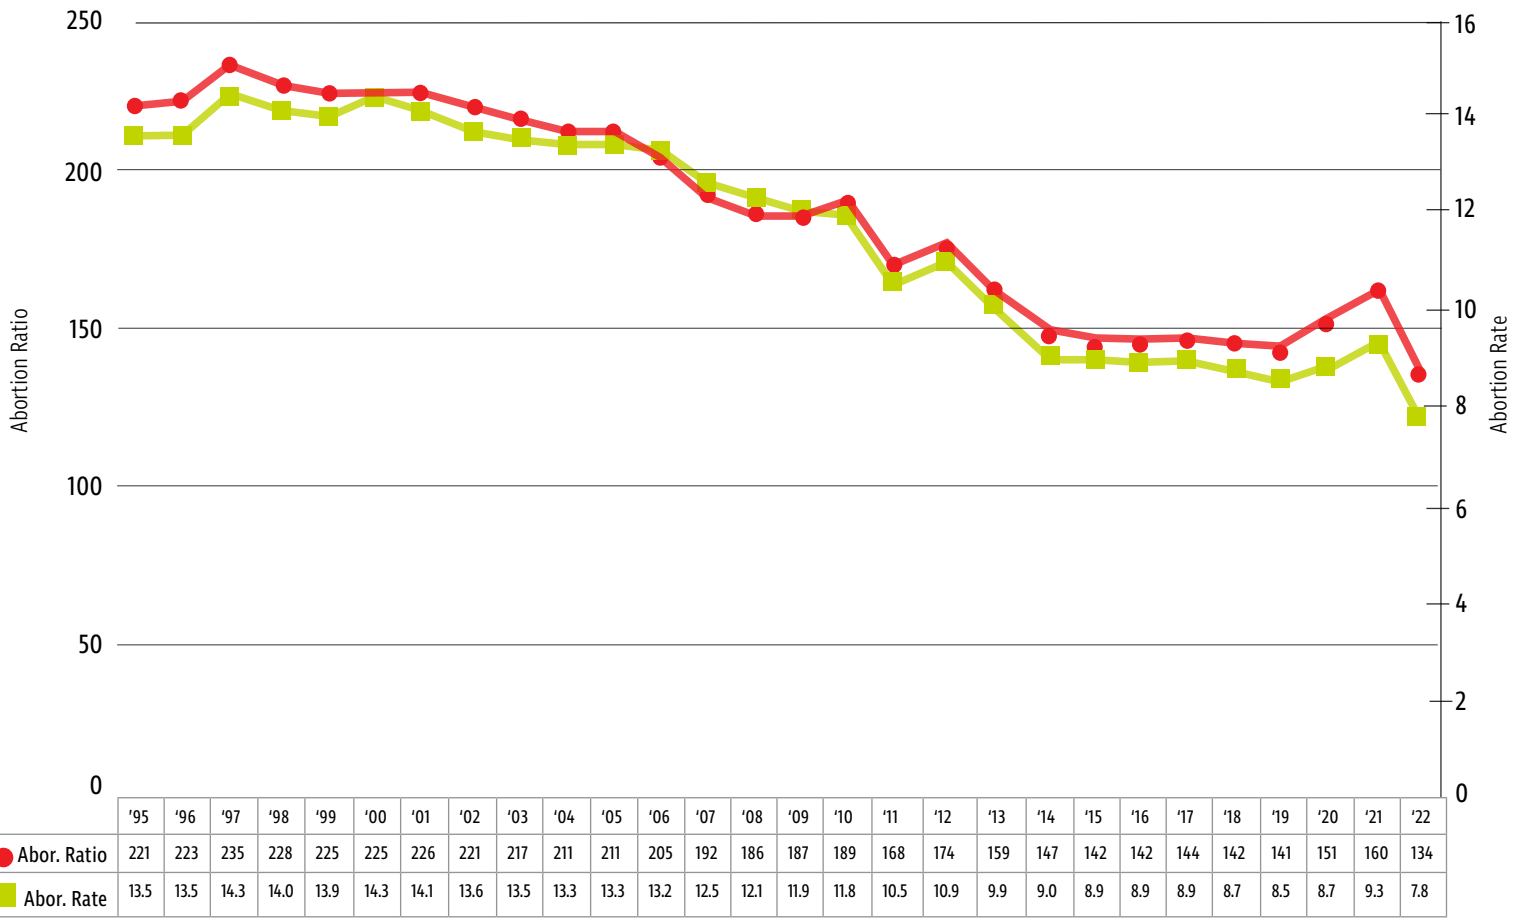

Excludes unknown unless otherwise stated.

Figure 3. Induced Abortions Reported in Ohio, by County of Occurrence, 2022

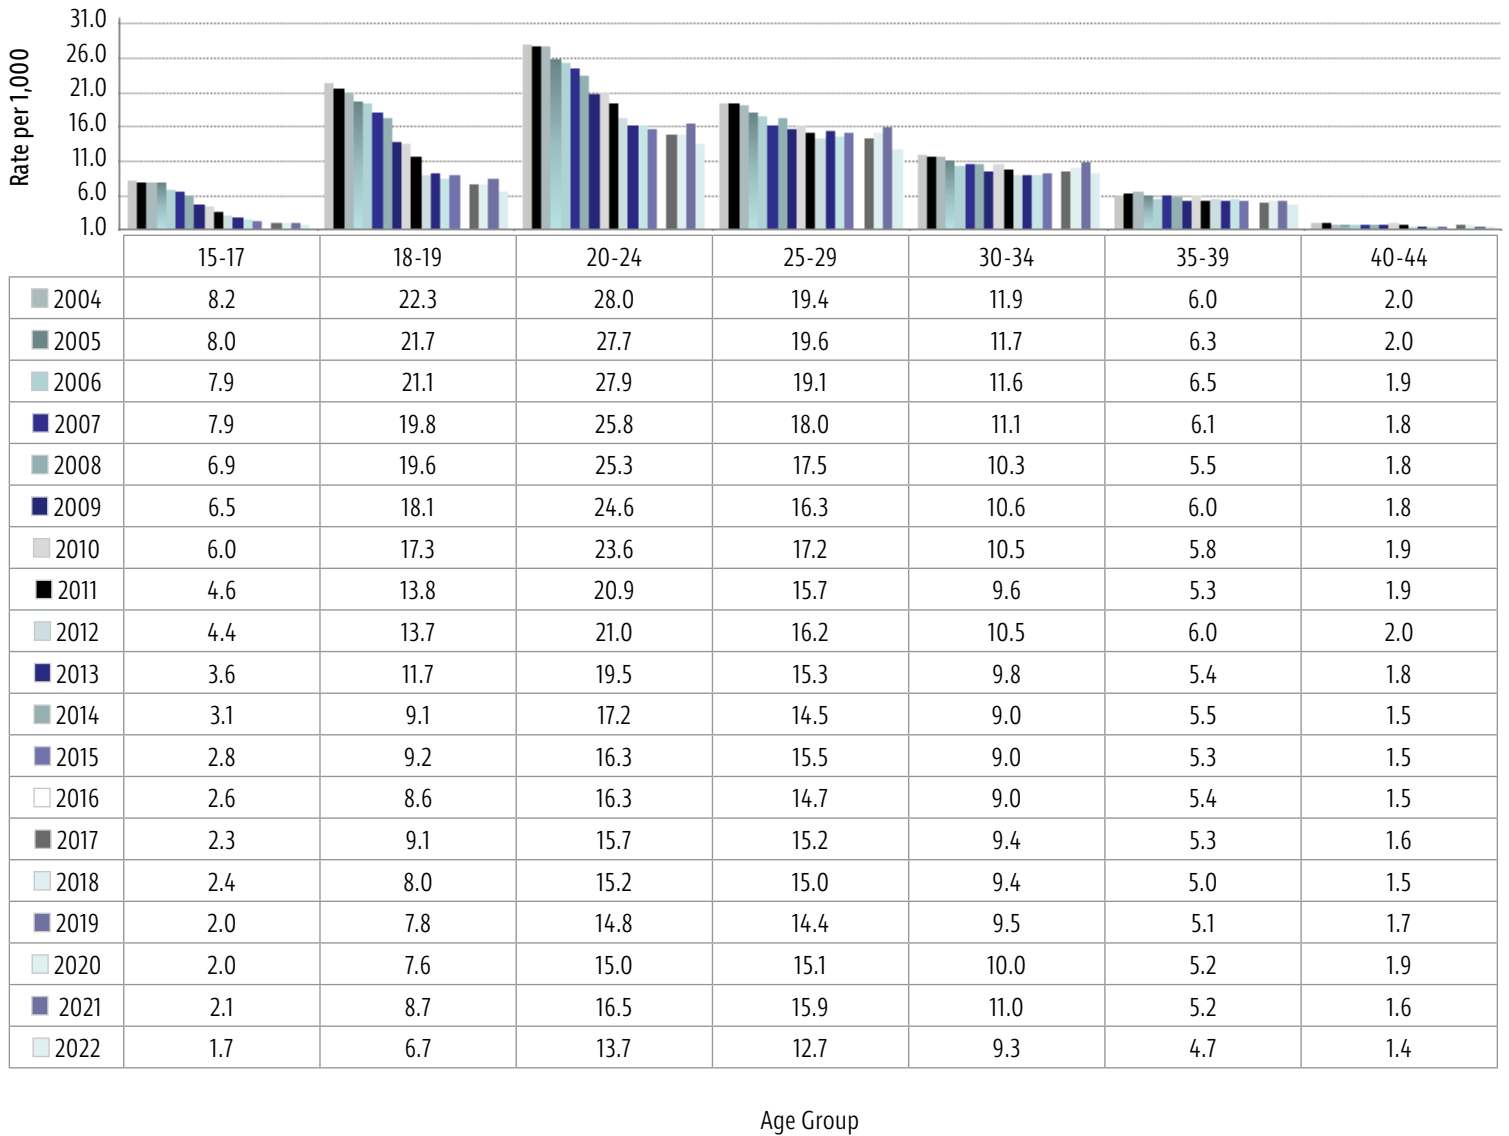

In the reports received, 10 counties were listed for an occurrence of an abortion. The counties not included in this chart had an occurrence of <0.0%. See Table 6 for more information.

Figure 4. Abortion Ratios and Abortion Rates, by Year, Ohio Residents, 1995-2022

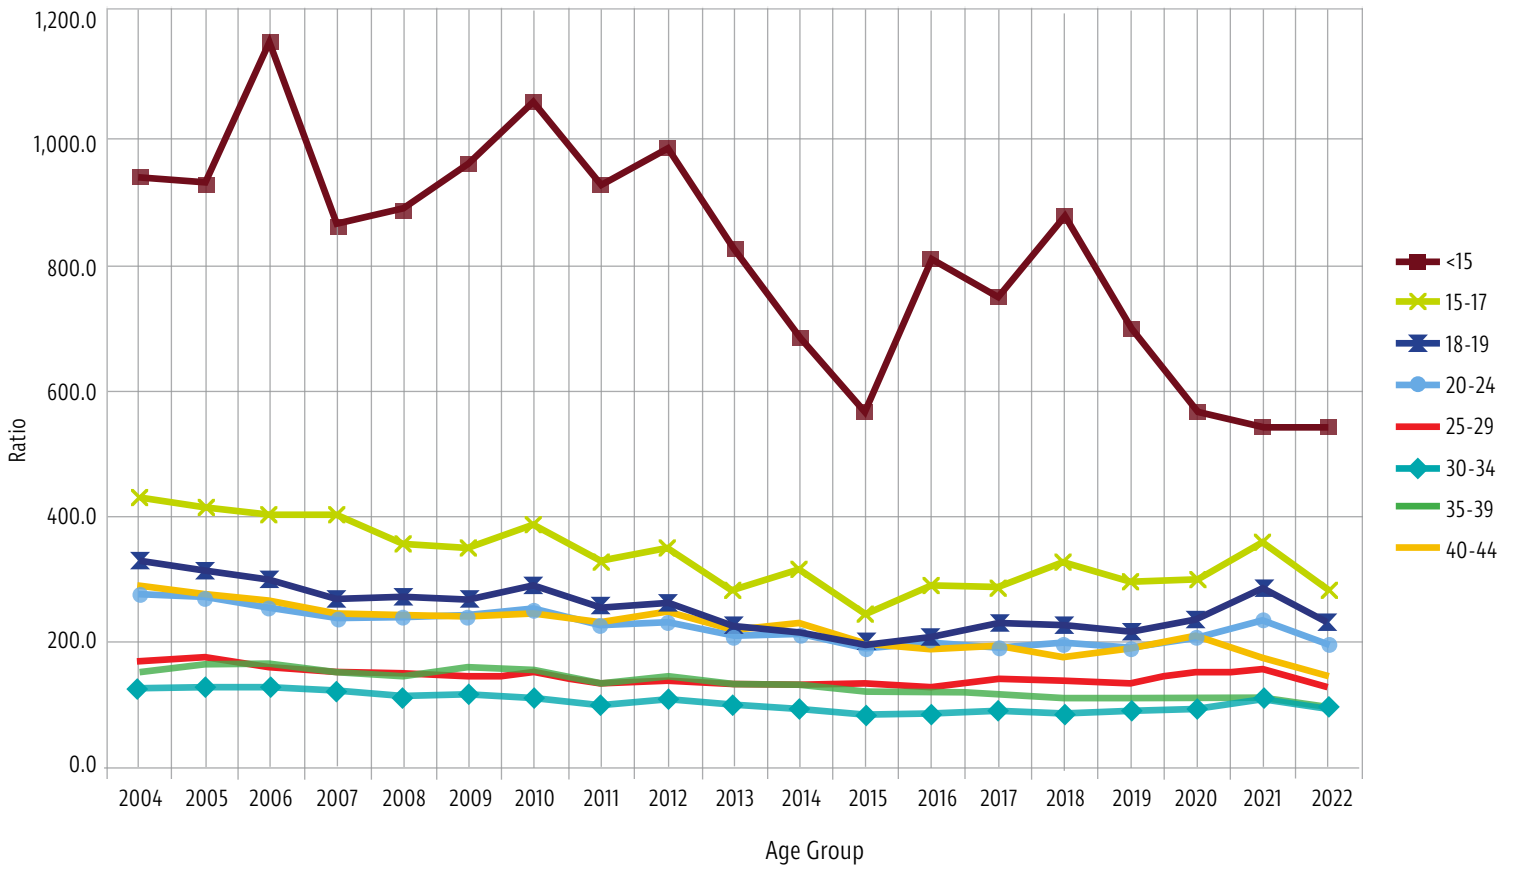

Abortion ratio is number of abortions per 1,000 live births.
 Abortion rate is number of abortions per 1,000 women ages 15-44.

Figure 5. Induced Abortion Rates per 1,000 Women, by Age Group and Year, Ohio Residents, 2004-2022

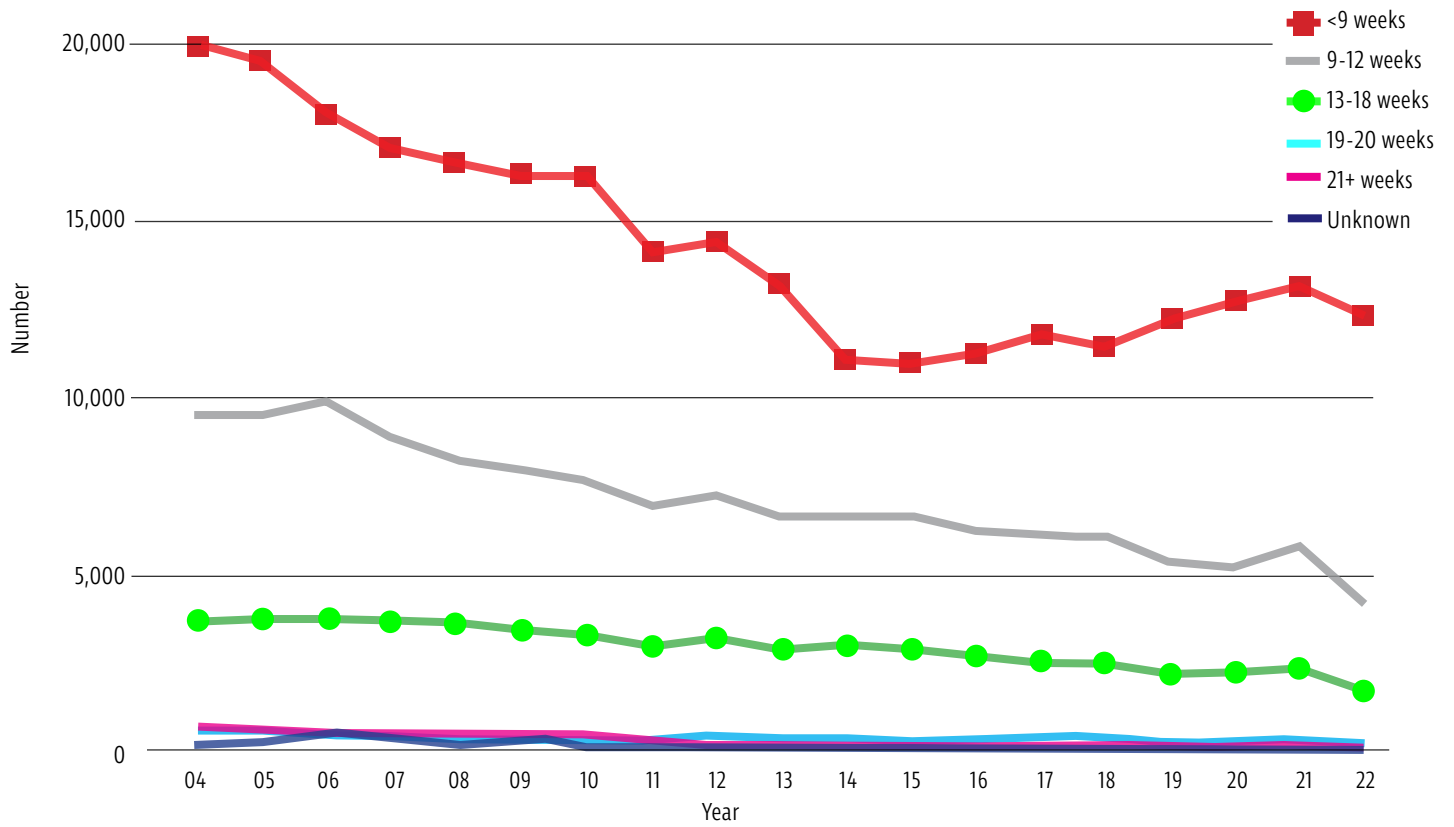

Abortion rate is number of abortions per 1,000 female population in a specified age group.

Figure 6. Induced Abortion Ratios, by Age Group and Year, Ohio Residents, 2004-2022

Abortion ratio is number of abortions per 1,000 live births in a specified age group.

Figure 7. Total Induced Abortions, by Weeks of Gestation and by Year, 2004-2022

See Table 1 and Table 8A for more information.
